GLOSSARY OF SKI TERMS
(Prepared by The National Ski Areas Association)

**Alpine skiing:** Downhill skiing.

**Apres-Ski:** Refers to the end of the day, after the slopes are closed when skiers go to restaurants and bars to socialize and talk about the day’s fun and adventures.

**Base lodge:** A lodge at the base of the slopes, usually containing a variety of skier services, from ticketing to food.

**Bowl skiing:** Skiing in open, above-tree-line areas, down broad expanses without trails. Bowl skiing is often, but not always, for more advanced skiers.

**Cross-country skiing:** Skiing on a generally flat surface, usually through wooded areas, on a specialized type of ski, thinner than a downhill ski.

**Glade skiing:** Downhill skiing in open areas surrounded, sometimes quite closely, by trees.

**Gondola:** An enclosed lift in which skiers stand or sit, usually taking a minimum of six persons at a time.

**Groomed Slope:** Refers to the slope terrain that has been groomed and is smooth.

**Heliskiing:** Skiing in which the participants are transported by helicopter to an area inaccessible by lifts.

**Lift Capacity Per Hour:** The number of people who can ride up the mountain on a lift in one hour. For example, a 2,600 lift capacity per hour means that the ski area's lifts can transport 2,600 skiers per hour at maximum capacity.

**Lift Line:** Refers to skiers waiting to board a chair lift.
Mogul: A bump on the slope.

Moguls: Refers to bumps formed on the ski slope, formed naturally after many skiers ski down a slope - usually enjoyed by intermediate and advance skiers.

NASTAR racing: An acronym for National Standard Racing. These are runs on standardized courses on which skiers are timed, their results ranked and the skiers rated.

Never-Ever: Refers to an individual who has never skied, usually someone who signs up for a first time ski lesson.

Powder snow: Fresh snow that has fallen at a very low temperature. The crystals do not stick together, giving the snow a dry, light feeling and the consistency of powder. Skiers can zip through powder snow.

Quad: A chair lift, carrying four people, that comes in two basic varieties. A high-speed detachable quad allows the lift operator to remove or add chairs depending on the skier load. A fixed-grip quad is a lift with chairs that cannot be removed.

Rope tow: A continuously moving rope that pulls skiers up the mountain as they stand on their skis. Rope tows usually are located on novice trails.

Ski In, Ski Out: Lodging so close to slopes whereby guests can conveniently walk to the slopes without needing transportation.

Ski touring: Off-trail skiing in less-accessible areas, usually reached only by hiking or snowcat.

Slopeside Lodging: Lodging adjacent to slopes. Guests ski to lifts.

Snowboarding: Descending a slope on a small board, wider and shorter than a ski, using techniques similar to surfing or skateboarding.

Snowcat skiing: Skiing in areas accessible only by snowcat, a vehicle able to haul skiers up the mountain.

Snowmaking: Refers to machines that make abundant artificial snow.

Surface lifts: Lifts that pull the skier up the mountain along the ground, such as rope tows and T-bars.

T-bar: A lift that pulls skiers up the mountain by means of a bar placed behind the skiers' legs.

Terrain park: Terrain parks are a new trends in ski areas nationwide. The new snow features, such as hits, splines, table tops and even an occasional quarter-pipe, are designed to challenge the skill level of all skiers and riders. Think of a terrain park as a challenging and fun-filled obstacle course.

Tree line: The altitude above which trees do not grow on the mountain, giving skiers an unobstructed expanse on which to ski.
**Vertical Drop:** The distance straight down the mountain, measured by the difference between the altitude at the top of the mountain and the base.

**BIG AIR:** When a snowboarder rides up the side of a half pipe or jump and ollies or jumps in the air.

**BOARDER CROSS RACES:** Boarder cross races consist of six snowboarders racing simultaneously over an obstacle course. Speed determines the winners. Boarder cross races will be a new Olympic event in the next Winter Olympics.

**GOOFY FOOT:** Riding with the right foot forward on the snowboard.

**REGULAR FOOT:** Riding with the left foot forward on the snowboard.

**HALFPIPE:** A channel constructed in the snow which resembles a pipe cut longitudinally. Halfpipes, or pipes, have consistent walls on both sides and are 100 to 400 feet long with walls up to 20 feet high.

**HIT or KICKER:** A raised area with an abrupt lip from which snowboarders jump to get airborne.

**LIP:** The top edge of a halfpipe wall.

**LOG and RAIL SLIDES:** Long cylinders above the snow which snowboarders use as a surface. Slides are constructed of logs, telephone poles, plastic or other materials. Riders also slide on staircase handrails on the slopes or in town.

**QUARTERPIPE:** A channel with only one wall.

**TABLETOP:** A mound of snow with the top sheared off providing a flat, level surface for snowboarders to jump over.

**TERRAIN PARK:** A place on the mountain where various obstacles have been built to help snowboarders and skiers perform freestyle tricks. Terrain parks usually have jumps, kickers, hips, rails, boxes, and tabletops for riders to perform freestyle tricks.
